PROFESSIONAL PROFILE

Business and technology professional with a background in coordinating international operations. Experienced in analysing processes, defining requirements and designing practical solutions, most recently leading discovery and solution design for a manufacturing automation project and building a live SaaS platform using React, Supabase and external AI APIs. Strong interest in using technology, data and AI to solve business problems and improve how organisations work.

CORE COMPETENCIES

- **Delivery & Analysis:** Project Delivery, Business & Systems Analysis, Requirements Analysis, Data Analysis
- **Process & Systems:** Process Improvement, Information Systems, AI & Automation Concepts
- **Leadership:** Stakeholder Management, Team Leadership, Problem Solving

TECHNICAL SKILLS

- **Data & BI:** Power BI, Excel, SQL, Python (ezdxf, pypdf)
- **Development & APIs:** React, Vite, Zustand, Supabase, Stripe Connect, Claude API, Google AI API, Claude Code, VS Code, Generative AI
- **Version Control, Quality & Deployment:** Git, GitHub (repositories, branches, commits, pull requests), GitHub Pages, GitHub Actions, ruff, mypy
- **Modelling & Diagramming:** BPMN, Process Modelling, Information Systems Modelling, Data Flow Diagrams, Lucidchart, draw.io
- **Project & Productivity:** MS Project, Trello, Miro, Slack, Microsoft Teams, Microsoft 365, MindView

WORK EXPERIENCE

Team Lead | AI Deployment Sprint Oct 2026 - Present

Skills: Business Analysis | Solution Design | Requirements | Python | Stakeholder Management

- Leading discovery on an eight-week programme delivered by Manchester Digital and Manchester Metropolitan University, to reduce repetitive manual CAD and DXF file preparation at a UK manufacturer; mapped the order-to-manufacture process in BPMN using Lucidchart, approved by the client, and timed the current process, finding that the manufacturing drawing took 72% of a 25-minute design task.
- Analysed 130 design and production files using Python (ezdxf, pypdf and zipfile) with AI-assisted development, and documented over 40 design and manufacturing rules validated with the client; automated checks showed the rules reproduced the finished cutting files (11 of 11 and 14 of 15 checks).
- Produced the business and solution analysis, including root cause analysis, user stories with acceptance criteria, functional and non-functional requirements with MoSCoW priorities, an options evaluation and the business case.
- Designed a rules-based order-to-production tool with human approval at each stage, built a Python proof of concept that reproduced an approved cutting file from a real order, and presented the solution, costs and risks to the client.
- Wrote the code design specification and the rules for AI-assisted coding, and set up automated quality checks (ruff, mypy, import-linter and GitHub Actions) ahead of the production build, while coordinating the team's planning and weekly logs.

Founder and Developer | Nupcial Feb 2026 - Present

Skills: Product Development | Full-Stack Development | API Integration | AI-Assisted Development

- Built and launched a live two-sided wedding planning SaaS platform using React, Vite, Zustand and Supabase, covering product concept, UX/UI and deployment, with Claude Code supporting AI-assisted development and debugging.
- Integrated generative AI features through external APIs, migrating from the Claude API to Google's AI API based on cost and product requirements.
- Set up the Supabase back end with row-level security, so each couple can only access their own wedding data, and Edge Functions for server-side logic.

- Delivered guest and seating management, budget tracking, vendor onboarding and a commission model through Stripe Connect, from initial prototype through to live deployment and ongoing development, with the code managed in Git and GitHub.

Higher Education and Professional Development Nov 2023 - Sep 2026

Skills: Information Systems | Systems Modelling | Business Intelligence | Data Analytics

- Completed an MSc in Information Systems Management with a Distinction and the School prize for the highest weighted mean grade on the programme (dissertation: 78%), producing information systems models in Lucidchart and draw.io and serving as Academic Representative for the course.
- Completed a BA (Hons) in Business Management with First Class Honours, serving as Student Representative throughout all four years.
- Attained professional certifications in Data Analytics, PRINCE2 and Six Sigma.

Repack Supervisor | Brand Addition Sep 2018 - Nov 2023

Skills: Project Coordination | Team Leadership | ERP Systems | Process Improvement

- Coordinated up to 300 international repack and logistics projects a year, leading a cross-site team across the UK and Germany to deliver within deadlines and quality requirements.
- Operated an internally developed ERP system daily across order processing, stock control, warehouse operations and project tracking, validating courier data imports through ETL processes and inventory reconciliations to minimise dispatch errors.
- Built KPI dashboards in Excel using Pivot Tables and variance analysis, resulting in a 45% increase in resource allocation efficiency.
- Authored the department's first official workflow document, standardising processes and reducing training time for new staff.

Aircraft Cargo Operator | CateringPor - Lisbon Mar 2015 - Mar 2018

Skills: Logistics Coordination | Compliance | Time Management | Operational Planning

- Oversaw cargo handling and ground operations for airlines including TAP, Air Canada and Emirates, across 200 daily flights.
- Completed all operational duties within each airline’s deadlines, in line with their safety, security and documentation regulations.
- Coordinated logistics under pressure within the limited time windows between flights.

Private Security Officer | Esegur and Prosegur - Lisbon Jul 2012 - Jan 2015

Skills: Record Management | Risk Assessment | Compliance | Incident Reporting

- Managed access control for a site of 400 employees and guests, keeping accurate entry records, security logs and incident reports.
- Carried out patrols, CCTV monitoring and regular risk assessments in line with site safety regulations.

EDUCATION

MSc Information Systems Management - Distinction 2025 - 2026

The University of Sheffield

School of Information, Journalism and Communication Prize for the highest weighted mean grade on the programme, 2026

BA (Hons) Business Management - First Class Honours 2021 - 2025

London Metropolitan University

NCFE Level 3 Certificate in Data Analytics 2025

NCFE

CERTIFICATIONS

- PRINCE2 Foundation - PeopleCert, 2024
- Six Sigma Yellow Belt - AIGPE, 2024
- Six Sigma White Belt - LinkedIn Learning, 2024
